

## Silicon Oscillators "SH32" and "SH53" Series

**MERCURY**  
Since 1973

The "SH" series is an extremely low power precision silicon oscillator with a total frequency error of less than 1.0%. This Si-gate CMOS oscillator produces a square wave output and requires no external components other than power supply bypass capacitors. The operating voltage range is from +1.5V to +3.3V, which allows operation from a single Li-Ion cell or 2 AA alkaline cells.

SH32

RoHS Compliant Product  
by Mercury

### Features:

- Hermetically sealed & metal-lid grounded ceramic leadless package
- Superior moisture resistant, compared to plastic molded packaging
- Internally frequency tuned to the specified voltage (no external components needed)
- Ultra-low supply current [10 uA typical at +2.5V]
- Fast start up time
- +1.55V to +3.3V single supply voltage
- Withstands high vibration and harsh environments
- Suitable for light weight, compact consumer electronic devices
- Ideal for high density boards
- RoHS compliant and (Pb) lead-free product
- United States Patent No: 6,281,732 \*

### Applications:

- ▲ Microprocessor Clocks
- ▲ Low Speed USB's
- ▲ Remote Controls
- ▲ Display Drives
- ▲ Home Appliances
- ▲ Motor Controls
- ▲ Building Controls
- ▲ Advanced Battery Chargers
- ▲ Replaces Ceramic Resonators

Supply Voltage Rise Time	1 u sec. min.				

Notes:

1/ Output signal frequency is stable by the second pulse cycle, after the supply voltage is stable. This time is dependent on the oscillator frequency, and it is given for 32.768 KHz.

2/ Oscillator start up requires a relatively clean supply voltage that does not drop down towards zero volts during turn on. After the supply voltage drops below about 1v, the voltage should go to 0v for 0.3 sec. min before the oscillator is turned on again.
